## *"In Terms of the Colossal"*

THE co-ordination of commercial strength, architectural vision and engineering skill which created this titanic quadruple office building represents the motive and creative force which has turned the eyes of the world toward this type of American architecture.

This, the largest office building in the world, possesses fundamentally magnificent largeness in its conception, and a clean-cut directness in its execution which place it among the most significant of American buildings.

With such existing structural achievements no architectural future is impossible, no project too vast or too complex to come readily to our imagination.

Certainly modern invention—modern engineering skill and organization, will prove more than equal to the demands of the architecture of the future.

Abraham Lincoln  
Washington, D. C.*

SEVENTEEN thousand pounds of ARMCO Ingot Iron was used in making the skylights of this famous structure. The architects adjudged it the very best material for the purpose—they were building for *permanence*.

## TIMKEN *Tapered* ROLLER BEARINGS

**Not only  
Radial Loads**

**Not only  
Thrust Loads**

**But all  
Combinations  
of both**

Rarely is an anti-friction bearing so favored as to need nothing more than the ability to carry pure radial (straight up-and-down) loads.

In an automobile, if the car tilts even slightly sidewise, or swings corners, there is side-thrust added to the normal up-and-down (radial) loads. In a machine, even when there is no other thrust, merely the running of a belt on a crown pulley imposes thrust.

As a matter of fact, an anti-friction bearing cannot pretend to be all-capable unless it carries the endless varieties of *combined* thrust and radial loads, present in nearly all bearing mountings.

Timken Tapered Roller Bearings do inherently provide this essential *Dual Duty* capacity, and the same principle gives Timkens their famous quality of adjustability for the wear that *must* follow motion.

The engineer of today finds no greater aids to the more efficient design and operation of machinery than Timken Tapered Roller Bearings. As your experience grows Timken ability may give you good reason to concur in Timken ascendancy in all mechanical engineering fields.
